

Ilshat Sultanov

Technical Lead
Chief Technology Officer

Job preferences

I am looking for a green field project.
I will help you assemble a dream team
to achieve your goals

About

- Husband, father of two wonderful children
- Clojure enthusiast, Craftsman, Software/Solution Architect, Full-Stack Software engineer, DevOps engineer
- Author and contributor to open-source projects

Education

Tyumen State University (2003-2008)
Specialist degree
Information systems in business reengineering

Interests

- Clojure (Script)
- Functional, reactive programming
- Pair programming, XP
- Event sourcing, CQRS
- Finite state machines, DSL, Parsing algorithms
- DevTools
- Real-time applications
- DevOps (Docker, Ansible, Kubernetes)
- CI/CD
- Best practices, 12-factor applications
- TDD, BDD, DDD
- Game development (ecs, bevy engine, rust)
- IDE development (wgpu, rust)
- Crafting compilers/interpreters (rust, zig lang)

Experience

Apr 2023 - Present

Remote

Solar Security
Technical Lead

Solar Dozor (production) - Information Leak Prevention System (DLP). It blocks the transfer of confidential documents, helps to identify signs of corporate fraud, and allows our customers to prevent security incidents.
Roles: Technical Lead, Team Lead, Mentor
Tech Stack: Clojure, PostgreSQL, ClickHouse, ElasticSearch, Gitlab CI/ CD, Jenkins
Team: 4 people

Achievements:

- I have developed a new API gateway service that allows our customers to automate their processes according to their needs. The API gateway communicates with all subsystems of the product and provides a single interface for users

Jun 2021 - Apr 2023

Remote

Freshcode
Senior Software engineer

- 1. Biomedicine project** (production) - We help our clients generate value from large-scale heterogeneous biomedical data - managing, analyzing, exploring, interpreting, and reporting - to create informed and actionable insights
Roles: Full-Stack Clojure developer, Mentor
Tech Stack: Clojure (Script), R, MySQL, Docker, AWS, GitLab CI
Team: 10 people
- 2. Clojure Garden** (open-source) - The navigator in the Clojure ecosystem
Roles: Software architect, Full-Stack Clojure developer, DevOps, Mentor
Tech Stack: Clojure (Script), PostgreSQL, Docker, DigitalOcean, GitHub Actions
Team: 4 people
Talks: [reClojure 2021](#)

Achievements:

- I quickly completed the onboarding process and started performing production tasks
- I am actively involved in:
 - improving the processes of hiring Clojurians and their onboarding
 - rewriting one of the largest and most complex modules - the mutation module
 - rewriting the frontend from scratch (Revamp UI/UX)

Sep 2018 - Jun 2021

Moscow, Russia

Sberbank
The Head of direction

- 1. Task flow control system** (production) - Automatic task allocation and employee workload management
Roles: TechLead, Software architect, Full-Stack Clojure developer, DevOps, Mentor
Tech Stack: Clojure (Script), PostgreSQL, Kafka, Docker, Openshift, Istio, Jenkins
Team: 15 people
- 2. Metadata management system** (MVP, closed) - Metadata management of the entire ecosystem of the bank allows you to improve the quality of data, data management and reduces the number of integrations between systems, companies
Roles: TechLead, Software architect, Full-Stack Clojure developer, DevOps, Mentor
Tech Stack: Clojure (Script), PostgreSQL, Docker, Openshift, Vault, Consul, Jenkins
Team: 5 people
Talks: [ClojuRu 2019 \(En\)](#), [Highload 2019 \(Ru\)](#)

Achievements:

- I have set up a CI/CD pipeline in various network circuits
- I very quickly (in 3 weeks) developed a prototype from scratch - backend and frontend, which helped us to present it to CTO of the bank and protect the project budget
- We very quickly (in 6 months) developed a new system from scratch - backend, frontend, integrated with 5 external systems and deployed in production

Apr 2018 - Sep 2018

Nizhny Novgorod, Russia

Auriga
Senior Software engineer
(as a contractor for the Intel Corp)

Software product release system (production) - This system manages the software release cycle of the entire corporation
Roles: Frontend developer, Mentor
Tech Stack: Clojure (Script), C#, .Net Core, MS SQL, TeamCity
Team: 10 people

Achievements:

- I rewrote the frontend core in 2 months. I found most of the bottlenecks and, together with the backend developers, fixed them, which allowed us to increase the system performance several times. E.g., the search page returned results within 10-20 ms instead of 30-50 seconds
- I fixed the development performance issues. I did a comparative analysis between the build tools and switched to a faster one. I rewrote the project structure, which allowed me to reduce the time of rebuilding the project and hot reloading several times. E.g., the new configuration took 5-10 seconds instead of 2-5 minutes compared to the previous one

Nov 2013 - Apr 2018

Surgut, Russia

JSC Tyumen Energy selling company
Senior Software engineer

- 1. Online office for large electricity consumers** (production) - This system helps our clients to forecast consumption and submit applications for the purchase of electricity on the wholesale market
Roles: Software architect, Full-Stack Web developer, DevOps
Tech stack: Java, Spring Boot, PostgreSQL, MS SQL, Ansible
Team: 3 people
- 2. Automation of routine work** - Notifications about checking metering devices, report and weather data downloader (crawler, web scrapping)
Roles: Software architect, Full-Stack Web developer, DevOps
Tech stack: Python, Clojure (Script), MS VBA
Team: 3 people

Achievements:

- I have been recognized as the best employee for 4 years in a row
- I took 2nd place in the talent contest
- I developed an algorithm with which we were able to improve the forecast of electricity consumption and reduce deviations from 5-10% to 1-2%, which allows the company to save a lot of money since then
- I have developed a mechanism that has reduced the deadline for submitting applications for the purchase of electricity on the wholesale market to 24 hours. Previously, our clients submitted applications 3 days before the auction. This mechanism made it possible for our customers to improve forecasting consumption, as well as to respond promptly to any problems in production and save a lot of money
- I have added to our customers and the company the ability to track consumption in almost real-time
- I have automated the collection of all analytical reports on the results of trading, their analysis, and the creation of reports for managers. Since then, it allows a company to save at least 3-4 working hours a day for 10 employees (in general, 30-40 hours a week)
