

Ilshat Sultanov

Technical Lead
Chief Technology Officer

Job preferences

I am looking for an opportunity to work on a green field project.
I will be happy to help you assemble a dream team to achieve your goals.
I am considering switching to game development or projects to create tools for developers, such as an IDE, etc.

About

- Husband, father of two wonderful children
- Clojure enthusiast, Craftsman, Software/Solution Architect, Full-Stack Software engineer, DevOps engineer
- Author and contributor to open-source projects

Education

Tyumen State University (2003-2008)
Specialist degree
Information systems in business reengineering

Interests

- Clojure (Script)
- Functional, reactive programming
- Pair programming, XP
- Event sourcing, CQRS
- Finite state machines, DSL, Parsing algorithms
- DevTools
- Real-time applications
- DevOps (Docker, Ansible, Kubernetes)
- CI/CD
- Best practices, 12-factor applications
- TDD, BDD, DDD
- Game development (ecs, bevy engine, rust)
- IDE development (wgpu, rust)
- Crafting compilers/interpreters (rust, zig lang)

Experience

Apr 2023 - Present
Remote

 **Solar Security**
Technical Lead

Solar Dozor (production) - Information Leak Prevention System (DLP). It blocks the transfer of confidential documents, helps to identify signs of corporate fraud, and allows our customers to prevent security incidents.
Roles: Technical Lead, Team Lead, Mentor
Tech Stack: Clojure, PostgreSQL, ClickHouse, ElasticSearch, Gitlab CI/ CD, Jenkins
Team: 4 people

Achievements:

- In 4 months, I have developed a new API gateway service from scratch. This service allows our customers to integrate their services/products with our system. The API gateway interacts with all the subsystems of our product and provides a single, user-friendly interface
- I have added fuzzing tests for the common module. This contributed to the successful certification of the company's new product

Jun 2021 - Apr 2023
Remote

 **Freshcode**
Senior Software engineer

- 1. Biomedicine project** (production) - We help our clients generate value from large-scale heterogeneous biomedical data - managing, analyzing, exploring, interpreting, and reporting - to create informed and actionable insights
Roles: Full-Stack Clojure developer, Mentor
Tech Stack: Clojure (Script), R, MySQL, Docker, AWS, GitLab CI
Team: 10 people
- 2. Clojure Garden** (open-source) - The navigator in the Clojure ecosystem
Roles: Software architect, Full-Stack Clojure developer, DevOps, Mentor
Tech Stack: Clojure (Script), PostgreSQL, Docker, DigitalOcean, GitHub Actions
Team: 4 people
Talks: [re:Clojure 2021](#)

Achievements:

- I completed the two-month onboarding process in two weeks and started performing production tasks
- I improved the processes for hiring Clojurians and onboarding them
- I rewrote one of the largest and most complex modules, the mutation module
- In addition, I worked as an architect and technical lead for UI/UX Revamp

Sep 2018 - Jun 2021
Moscow, Russia

 **Sberbank**
The Head of direction

- 1. Task flow control system** (production) - Automatic task allocation and employee workload management
Roles: TechLead, Software architect, Full-Stack Clojure developer, DevOps, Mentor
Tech Stack: Clojure (Script), PostgreSQL, Kafka, Docker, Openshift, Istio, Jenkins
Team: 15 people
- 2. Metadata management system** (MVP, closed) - Metadata management of the entire ecosystem of the bank allows you to improve the quality of data, data management and reduces the number of integrations between systems, companies
Roles: TechLead, Software architect, Full-Stack Clojure developer, DevOps, Mentor
Tech Stack: Clojure (Script), PostgreSQL, Docker, Openshift, Vault, Consul, Jenkins
Team: 5 people
Talks: [ClojuRu 2019 \(En\)](#), [Highload 2019 \(Ru\)](#)

Achievements:

- I have set up a CI/CD pipeline for all product services (linters, formatters, tests, builds and versioning)
- I created a prototype, from scratch, in just three weeks, including both the server and client sides. Thanks to this effort, we were able to present our work to the technical director of the bank and successfully confirm the project's budget

Apr 2018 - Sep 2018
Nizhny Novgorod, Russia

 **Auriga**
Senior Software engineer
(as a contractor for the Intel Corp)

Software product release system (production) - This system manages the software release cycle of the entire corporation
Roles: Frontend developer, Mentor
Tech Stack: Clojure (Script), C#, .Net Core, MS SQL, TeamCity
Team: 10 people

Achievements:

- I rewrote the core of the frontend in two months, working hard to improve the performance on the UI. During this time, I identified all the bottlenecks in the application, and made improvements that have significantly improved system performance. For instance, the search page now returns results within 10-20 milliseconds, instead of the previous 30-50 seconds
- I conducted a comparative analysis of the build tools and carried out the migration. This allowed us to reduce the time required for rebuilding the project and hot reloading the code. For instance, the new configuration now takes 5-10 seconds, compared to 2-5 minutes

Nov 2013 - Apr 2018
Surgut, Russia

 **JSC Tyumen Energy selling company**
Senior Software engineer

- 1. Online office for large electricity consumers** (production) - This system helps our clients to forecast consumption and submit applications for the purchase of electricity on the wholesale market
Roles: Software architect, Full-Stack Web developer, DevOps
Tech stack: Java, Spring Boot, PostgreSQL, MS SQL, Ansible
Team: 3 people
- 2. Automation of routine work** - Notifications about checking metering devices, report and weather data downloader (crawler, web scrapping)
Roles: Software architect, Full-Stack Web developer, DevOps
Tech stack: Python, Clojure (Script), MS VBA
Team: 3 people

Achievements:

- For four years in a row, I was recognized as the best performer, and also took second place in the company's annual young talent competition
- I developed an algorithm that has helped improve the accuracy of the company's forecasts for electricity consumption, reducing deviations from 5-10% to 1-2%. Since implementing this algorithm, the company has seen significant savings when buying and selling electricity in the wholesale market
- I have developed several services that have helped our customers reduce the time it takes to submit applications for purchasing electricity on the wholesale market from 3 days to 24 hours. This automation has allowed our clients to improve their consumption forecasting and respond more quickly to any production issues, saving them significant funds
- I have added integration with the AIMS CEM software, which allows the company and our customers to track electricity consumption in almost real time
- I have automated the process of collecting all analytical reports on trading results, analyzing them, and creating reports for managers. This has allowed the company to save at least 3-4 working hours per day for 10 employees, which amounts to 30-40 hours per week in total
